SSE South Africa is proud to advise our appointed as the sole importer and distributor of the Conzerv range of energy management products in South Africa.

The product will be distributed through SSE's Branches in Centurion, Cape Town, Durban and Port Elizabeth.

The Official launch of the product is scheduled for August/September 2006 watch the press for details.

Product Overview

The three steps in Conzerv's Energy Management System are: Measure, Detect and Control.

Measure

Our made-to-measure digital meters help you monitor and log critical parameters round-the-clock and with clockwork precision.

Detect

Post-measurement, our auditing services identify energy losses in the system, and the measures needed to optimize energy usage.

Control

Once the parameters have been measured and critical energy-loss junctures identified, our Energy Management System team will analyze and build a customized, real-time monitoring and control system that ensures minimized energy losses and maximized power factors.

The 3-step plan integrates each intricate facet of energy management - right from measuring the parameters to know what the status quo is; to evaluating and auditing to know where exactly in the system energy could and should be saved; and finally developing a solution that enables the necessary know-how for efficient energy management.

Simplified, yet not simplistic, this linear methodology integrates Conzerv's metering products, auditing services and Energy Management System software, to provide a customized, turnkey solution which will optimize energy usage and substantially lower energy costs.
